Introducing ClaimSecure's Latest Drug Management Tools...

Formulary Protect and Formulary Protect Plus

ClaimSecure recognizes the potential financial impact our clients are facing due to the increasing use of high cost Specialty Drugs. We are committed to ensuring our clients have options that can mitigate their financial exposure and still provide support to their members. We are pleased to announce two new formulary offerings – Formulary Protect and Formulary Protect Plus, available nationally – except Quebec.

Formulary Protect provides coverage for commonly prescribed drugs while excluding all Specialty Drugs to ensure the sustainability of your drug plan.

This new plan design is expected to impact a very small number of your members – less than 1%, while eliminating your exposure to high cost Specialty Drugs, which can represent over 20% of your total drug plan cost. Formulary Protect still provides coverage for commonly used drugs while ensuring the sustainability and affordability of your plan.

Introducing ClaimSecure's Latest Drug Management Tools...

Formulary Protect Plus provides coverage for most commonly prescribed medications while excluding Specialty Drugs funded by the provincial drug programs. It also offers two important benefits to your plan members:

- (1) Coverage Navigation Service** – Our Clinical Services experts provide specialized assistance and guidance on coverage options to your members for the Specialty Drugs. This service includes introducing members to provincial and manufacturer sponsored programs for coverage and assistance with their application. Your members are supported every step of the way.

- (2) Specialty Drugs** not listed on the provincial formulary are available if the plan member attempted and failed the therapeutically equivalent Specialty Drug(s) covered by the provincial program. Drug coverage is then based on ClaimSecure's Special Authorization criteria.

Notes:

- Formulary Protect and Protect Plus are not available in Quebec.
- Coverage Navigation Service is available on a fee for service basis and is optional under Formulary Protect and mandatory under Formulary Protect Plus
